REINTEGRATION CARE UNIT REFERRAL AND FUNCTIONAL ASSESSMENT

The **Short-Term Transitional Care Models (STTCM)** pilot project was launched in Fall of 2017 by the Toronto Central LHIN and funded by the Ministry of Health and Long-Term Care to support the transition of patients from hospital to the community who are ALC or who are at high risk of becoming ALC without additional resources and supports. The initiatives are needs based, time limited and with no additional fee for the programs.

The **Reintegration Care Units** (RCUs) is one of those initiatives, providing patients with a short-term safe and supportive place to go post-hospital discharge with a focus on patient goals and needs for re-activation and engagement, while also allowing time to optimize, plan and prepare their next community transition (home, new community housing, more supportive housing, other supportive environments etc.). Patients do need to have a discharge destination to work towards at time of referral. RCU Providers are: Bellwoods (Community Connect); LOFT (White Squirrel Way and Pine Villa), Sprint (Pine Villa), Reconnect Community Health Services (Doug Saunders and 2 sites), Rekai Centres (Rekai Centres Transitional Care Unit), The Neighbourhood Group (various independent units) and UHN (Hillcrest Reactivation Centre and St. Hilda's Transitional Care Program). There is also a provider for French speaking patients with Centres D'Accueil Héritage.
